Somatic embryogenesis is another important way to regenerate new plants in plant tissue culture. Embryo development occurs through an exceptionally organized sequence of cell division, enlargement and differentiation .

Somatic embryogenesis is an artificial process in which a plant or embryo is derived from a single somatic cell or group of somatic cells. Somatic embryos are formed from plant cells that are not normally involved in the development of embryos, i.e. ordinary plant tissue. No endosperm or seed coat is formed around a somatic embryo.
