Cognitive Rehabilitation: An Integrative

Cancer-related cognitive impairment (CRCI) is a widespread problem for the increasing population of cancer survivors. Our understanding of the nature, causes, and prevalence of CRCI is hampered by a reliance on clinical neuropsychological methods originally designed to detect focal lesions. Future progress will require collaboration between neuroscience and clinical neuropsychology.

A Call for a Neuroscience Approach to Cancer-Related

The required courses for Cognitive Science Majors are divided into five general areas as described below. The program is structured so as to ensure some exposure to each of the five areas. In addition, it provides in-depth training in two of the areas, deemed focal areas, chosen by the student.

Cognitive Science Major & Focal Areas | Cognitive Science

A neuropsychological evaluation is the foundation for understanding the child's cognitive strengths and weaknesses, so that the best educational planning can take place. A neuropsychological evaluation can determine the integrity of brain
