In computer engineering, computer architecture is a set of rules and methods that describe the functionality, organization, and implementation of computer systems. Some definitions of architecture define it as describing the capabilities and programming model of a computer but not a particular implementation. In other definitions computer architecture involves instruction set architecture ...

In computer engineering, microarchitecture, also called computer organization and sometimes abbreviated as  $\hat{\mu}$ arch or uarch, is the way a given instruction set architecture (ISA), is implemented in a particular processor. A given ISA may be implemented with different microarchitectures; implementations may vary due to different goals of a given design or due to shifts in technology.
