concurrency verification introduction to pdf

Concurrent computing is a form of computing in which several computations are executed during overlapping time periodsâ€”concurrentlyâ€”instead of sequentially (one completing before the next starts). This is a property of a systemâ€”this may be an individual program, a computer, or a networkâ€”and there is a separate execution point or "thread of control" for each computation ("process").

Concurrent computing - Wikipedia

The actor model in computer science is a mathematical model of concurrent computation that treats "actors" as the universal primitives of concurrent computation. In response to a message that it receives, an actor can: make local decisions, create more actors, send more messages, and determine how to respond to the next message received. Actors may modify their own private state, but can only ...

Actor model - Wikipedia

Overview Source code review is the process of manually checking the source code of a web application for security issues. Many serious security vulnerabilities cannot be detected with any other form of analysis or testing.

Testing Guide Introduction - OWASP

AJ: Data-centric concurrency control for Java using atomic-sets. Project completed in 2013 in collaboration with IBM research. Data available.
