Concurrency: An Introduction Thus far, we have seen the development of the basic abstractions that the OS performs. We have seen how to take a single physical CPU and turn it into multiple virtual CPUs, thus enabling the illusion of multiple pro-grams running at the same time. We have also seen how to create the

INTRODUCTION-WHY CONCURRENCY IS NECESSARY Processor speed has slowed and we can use transistors from Moore's law for parallelism to increase speed. Concurrent programming is necessary to utilize parallel hardware. Sometimes it is natural to describe a problem with multi-threads just like divide a

problem into several steps.

machines, and is intended to facilitate formal verification. Regrettably, the standard essentially fails to give a concurrency model, resulting in radically different behaviors of the same source code from on runtime environments from different vendors, and (worse) highly nondeterministic behaviors on runtimes from any given vendor.

In order to ensure that the bridges behave correctly regardless of the topology of the surrounding bridges and LANs, the Rebeca modular verification techniques are applied. These techniques are shown to be efficiently applicable in model checking of open systems.
