The conformal covariance of the operator product expansion in the Thirring model is verified, but the vacuum state is found to be invariant only under the $O_{2,2}$ subalgebra of the infinite conformal algebra.

In mathematics, conformal geometry is the study of the set of angle-preserving transformations on a space. In a real two dimensional space, conformal geometry is precisely the geometry of Riemann surfaces .

Conformal and Superconformal Symmetries The conformal symmetry group is generated by the following operators: 1. The momenta $P = i \partial$ generate spacetime translations, $\exp(i a P) X \exp(-i a P) = X + a$: (1) 2. The angular momenta $J = X P - P X + S$ generate rotations of space and Lorentz boosts,
