Part ii "Neurological Disorders"

Chapter 3 Abstract Small fiber neuropathy (SFN) is a neuropathy selectively involving small diameter myelinated and unmyelinated nerve fibers. Interest in this disorder has considerably increased during the past few years. It is often idiopathic and typically presents with peripheral pain and/or symptoms of autonomic dysfunction.

Chapter 3 Small fiber neuropathy: a common and important

Peripheral Nerve Disorders. There are many types of peripheral neuropathy, often brought on by diabetes; genetic predispositions (hereditary causes); exposure to toxic chemicals, alcoholism, malnutrition, inflammation (infectious or autoimmune), injury, and nerve compression; and by taking certain medications such as those used to treat cancer and HIV/AIDS.

Peripheral Nerve Disorders - Department of Neurology

In addition, peripheral nerve disorders can be seen in several medical conditions that are found in people with IDD with the same frequency as in people without IDD. It is not difficult to find, for example, descriptions of peripheral neuropathies in persons with diabetes and no IDD, but similar studies are not found in persons with IDD.
