Lyme disease is the most common tick-borne disease in North America, and is transmitted by blacklegged ticks carrying Borrelia bacteria. Infection by a tick takes at least 24 hours because of the time required for the bacteria to travel from the tick midgut to its salivary glands.

A microlens is a small lens, generally with a diameter less than a millimetre (mm) and often as small as 10 micrometres ( $\text{\AA}\mu\text{m}$ ). The small sizes of the lenses means that a simple design can give good optical quality but sometimes unwanted effects arise due to optical diffraction at the small features. A typical microlens may be a single element with one plane surface and one spherical convex ...

Global consumption of 3D printing systems, printing materials, parts, software, and related services amounted to over \$13 billion in 2016. Also, worldwide spending on 3D printing is expected to have an annual growth rate of 22.3% in the next few years, and  $\hat{\wedge}$ <sup>1</sup>\$29 billion of revenues are expected by 2020.

Some applications of cryogenics: Nuclear magnetic resonance (NMR) is one of the most common methods to determine the physical and chemical properties of atoms by detecting the radio frequency absorbed and subsequent relaxation of nuclei in a magnetic field. This is one of the most commonly used characterization techniques and has applications in numerous fields.
