

pulsed yag laser surgery pdf

A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation. The term "laser" originated as an acronym for "light amplification by stimulated emission of radiation". The first laser was built in 1960 by Theodore H. Maiman at Hughes Research Laboratories, based on theoretical work by Charles Hard Townes and Arthur ...

Laser gain medium and type Operation wavelength(s) Pump source Applications and notes Dye lasers: 390-435 nm (), 460-515 nm (coumarin 102), 570-640 nm (rhodamine 6G), many others Other laser, flashlamp Research, laser medicine, spectroscopy, birthmark removal, isotope separation. The tuning range of the laser depends on which dye is used.

The Er,Cr:YSGG laser permits photons with wavelength of 2.78 μm and a pulsed duration of 140-200 microseconds with a repetition rate of 20 Hz. The laser device uses a pulsed energy source; a sapphire MS75 tip (Biolase, Inc.) with a length of 6 mm and diameter of 750 μm was used with an 80% water and 40% air spray during irradiation. The sapphire tip was positioned 1 to 2 mm from the target ...

Conservative Surgical Treatment of Bisphosphonate-Related

Il laser (acronimo dell'inglese "light amplification by stimulated emission of radiation", in italiano "amplificazione di luce mediante emissione stimolata di radiazione") è un dispositivo in grado di emettere un fascio di luce coerente. Il termine si riferisce oltre che al dispositivo anche al fenomeno fisico dell'amplificazione per emissione stimolata di un'onda elettromagnetica.

La découpe laser est un procédé de fabrication qui consiste à découper la matière grâce à une grande quantité d'énergie concentrée par un laser et concentrée sur une très faible surface. Cette technologie est majoritairement destinée aux chaînes de production industrielles, mais peut également convenir aux boutiques, aux établissements professionnels et aux tiers-lieux de ...

La télédétection par laser ou lidar, acronyme de l'expression en langue anglaise « light detection and ranging » ou « laser detection and ranging » (soit en français « détection et estimation de la distance par la lumière » ou « par laser »), est une technique de mesure à distance fondée sur l'analyse des propriétés d'un faisceau de lumière renvoyé vers son émetteur.
