Financial modeling is the task of building an abstract representation (a model) of a real world financial situation. This is a mathematical model designed to represent (a simplified version of) the performance of a financial asset or portfolio of a business, project, or any other investment.. Typically, then, financial modeling is understood to mean an exercise in either asset pricing or ...

Studies that seek to forecast stock price movements often consider measures of market sentiment or stock return momentum as predictors. Recent research shows that a multiplicative combination of sentiment and momentum can help predict the return on the Standard & Poor's 500 stock index over the next month.

I directly focus on the source of financing in takeovers instead of the common but indirect approximation by the payment method. By examining a sample of 610 acquisitions occurring between 1991 and 2009, I am able to distinguish between several different sources of financing for sizeable transactions and to additionally control for any payment effect.

The direct effect of CO₂ is only 1.2C. The IPCC estimates that carbon dioxide's direct effect is 1.2 °C 1 of warming (that is, before feedbacks are taken into account) for each doubling of the carbon dioxide level. Models amplify that warming with assumptions about positive feedback (see the blue region of model estimates in the graph below). But observations show that net feedback is ...
