Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a=0$), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

We've had a few comments come in this week from people struggling with their lack of progress and dissatisfaction with their size gains as compared to their strength gains.. I've written about this before and showed the geometric relationship between the area of a muscle and its cross-sectional size. This is a law which can't be overcome " you will always see a disproportionate ...
