Every human life begins with the fertilization of an egg (1). Once the egg and the sperm have fused, the parental chromosomes need to be united. To this end, the egg and sperm chromosomes are first packaged into two separate membrane-enclosed nuclei. These nuclei then slowly move toward each other and break down in the center of the fertilized egg, called the zygote.

A double layer (DL, also called an electrical double layer, EDL) is a structure that appears on the surface of an object when it is exposed to a fluid. The object might be a solid particle, a gas bubble, a liquid droplet, or a porous body. The DL refers to two parallel layers of charge surrounding the object. The first layer, the surface charge (either positive or negative), consists of ions ...
