Amundsen-Scott South Pole Station is one of three year-round Antarctic research stations operated by the National Science Foundation, which manages the U.S. Antarctic Program. The United States has maintained a scientific station at the South Pole since the International Geophysical year in 1957.

## **Centennial Poster back - National Science Foundation**

The South Pole is the southernmost point on the Earth. It is the precise point of the southern intersection of the Earth's axis and the Earth's surface. From the South Pole, all directions are north. Its latitude is 90 degrees south, and all lines of longitude meet there (as well as at the North Pole, on the opposite end of the Earth). The South Pole is located on Antarctica, one of the Earth ...

The lunar South Pole is one of the most compelling places in the entire Solar System. This region of the Moon is important for lunar scientists. The towering massifs of the South Pole-Aitken Basin can be accessed, and these massifs contain impact melt that will allow scientists to unambiguously determine the age of this huge basin.

## **NASA - Lunar South Pole**

An interesting first hand account of the Norwegian expedition's successful attempt to reach the South Pole. Strangely enough the journey to and capturing of the Pole is probably the least interesting bit of the book.
