Serum sickness in humans is a reaction to proteins in antiserum derived from a non-human animal source, occurring 5-10 days after exposure. It is a type of hypersensitivity, specifically immune complex hypersensitivity (III). The term serum sickness-like reaction (SSLR) is occasionally used to refer to similar illnesses that arise from the introduction of certain non-protein substances, such ...

Human cloning is the creation of a genetically identical copy (or clone) of a human. The term is generally used to refer to artificial human cloning, which is the reproduction of human cells and tissue. It does not refer to the natural conception and delivery of identical twins. The possibility of human cloning has raised controversies. These ethical concerns have prompted several nations to pass ...

Every human life begins with the fertilization of an egg (1). Once the egg and the sperm have fused, the parental chromosomes need to be united. To this end, the egg and sperm chromosomes are first packaged into two separate membrane-enclosed nuclei. These nuclei then slowly move toward each other and break down in the center of the fertilized egg, called the zygote.
