2. Determine the appropriate test statistic. A test statistic is a random variable used to determine how close a specific sample result falls to one of the hypotheses being tested. That is, the test statistic tells us, if  $H_0$  is true, how likely it is that we would obtain the given sample result. Often, a Z score is used as the test statistic.

Yet in practice, most simple random samples are drawn without replacement, since we want to avoid the strange assumption of one person being tallied as two or more. To resolve this disparity between statistical theory and practice, the variance formulas used in simple random sampling are changed somewhat, as described next.

Normally, when you print a PDF that contains layers, just the content that is visible onscreen is printed. However, the creator of a layered PDF can control what prints, regardless of its visibility onscreen. The PDF creator can require that watermarks print or prevent the printing of confidential information.
